Personal Projects

VIT-AP Night canteen   **GitHub**

It is an innovative and user-friendly android application for managing the night canteen at our college. Designed and implemented the user interface (UI) and handled both front-end and back-end development for the staff page.
Scripting Language: XML
Languages: Java

Flash Chat   **GitHub**

Designed and developed a feature-rich Flutter application with real-time chat functionality, integrated Firebase for secure authentication and logging, and ensured smooth data synchronisation. Focused on creating an intuitive user experience while maintaining robust backend connectivity and security.
Language: Dart
Database: Firebase

Coin Ticker   **GitHub**

Developed a cross-platform Coin Ticker app using Flutter, providing real-time cryptocurrency values in any selected currency. Integrated CoinAPI for live data updates, ensuring accurate and dynamic tracking. The app is fully functional on both iOS and Android, offering a seamless and intuitive user experience.
Language: Dart
API:CoinAPI
